

Monday 11/2/15 -- we begin our iPad course and iPad journey! All aboard!

*Homework is due by Sun midnight 11/15. Lesson 2 will be sent Mon11/16.*

*Created for you: Shared GD Folder + Shared Dropbox Folder + Seesaw Portfolio.*

**What iOS do you have?** iOS stands for **iPAD OPERATING SYSTEM**. Just recently, Apple released iOS9. To find your iOS, you go to **SETTINGS** then **GENERAL** then **ABOUT**. If you look about 8 down, it will say **VERSION**. Check out to see if it says 9.0 or 9.1 or 8.5 or whatever.

**Let us begin our iPad course.** I have two goals for our first week. The first goal is to build basic vocabulary and basic skills. I have put a list of **15 Starter Skills** on our Shared Doc. I would like to make sure you can do these 15 tasks so I will teach you by text and by video.

The second goal is for all of us to gain skill with one common app and to compare what we have done with each other. The one I have chosen for this week is Skitch and we will encounter this later in this handout.

Some starter questions -- my guess is that you know the answers to some of them, but the end of the next week or two or three I want you to know all of them!

- How do you prevent the iPad from wobbling where the orientation changes when you tip it from left to right?
- How many ports does the iPad have (input/output) and what is the function of each one?
- How many items can go into the dock and how do you add or delete them?
- Do you know the multi-finger gesture to close an app by pinching with 5 fingers?
- Do you know how to access the multitasking tray by double pressing the home button? How do you remove 1 app from RAM? Can you remove 2 or 3 at the same time? Why is this useful at times?
- Do you know how to go from one open app to another open app by swiping left or right with 4 fingers?
- What is the iOS of your iPad?
- How many ways can you swipe down from the top edge? How many ways can you swipe up from the bottom edge? What does each of the swipes get you?
- How do you take a screen snapshot?

So the first HW assignment (HW1.1) is to work through as many of the **15 Starter Skills** as you can. You can find these **15 Starter Skills** at the end of this PDF and also on our Shared Doc where you will find your names and can write short comments like "I knew this already" or "never knew this one" or "still confused" or whatever.

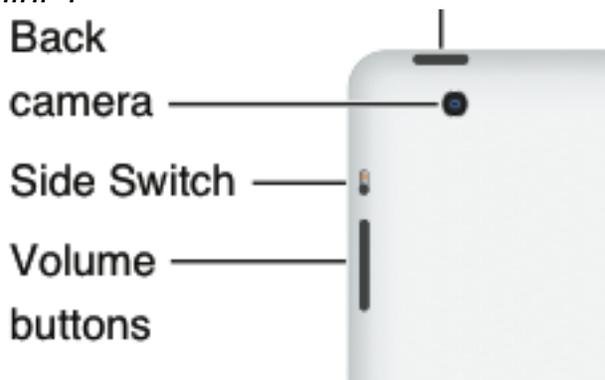

Let's begin the instruction. I truly believe in the importance of teaching to different styles of learners. Watching the videos vs. reading this PDF are two different ways of absorbing the content.

The magic number is 6. There are 6 physical ports or buttons on the surface or edge of the iPad. Be careful if you have a case that might be covering something up!

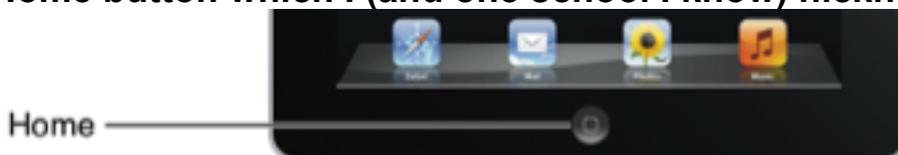

- the home button or belly button takes you back to the home screen
- the connector that either is used for electricity or to connect to your computer
- the speaker port for headphones or an external speaker
- the on/off button (press and hold) which also is called the sleep/wake button (press once)

- the volume button which also snaps a picture in camera mode
- the side switch which mutes the volume automatically in standard usage; this side switch can be programmed to lock orientation using SETTINGS and GENERAL and lock rotation *\*\* important note: the side switch no longer exists on the iPad Air 2 or iPad mini 4 \*\**

**Home button which I (and one school I know) nickname the “belly button”**

The Home button lets you get back to the Home screen at any time. It also provides other convenient shortcuts. To display the multitasking tray to see recently used apps: double-click the Home Button. Notice that there are 4 apps in the dock on this picture but you can have six!

## Customizing the Home screen

You can customize the layout of app icons on the Home screen—including the icons in the Dock along the bottom of the screen. Note you can have 6 icons in the dock on the bottom strip of your iPad

You can create additional Home screens and arrange your apps over multiple Home screens. To rearrange icons: touch and hold any app on the Home screen until it jiggles. Arrange the apps by dragging them. Press the Home button to save your arrangement.

To move an icon to another screen: While arranging icons, drag an icon to the right edge of the screen until a new screen appears. You can return to a previous screen and drag more icons to the new screen.

To create additional Home screens: While arranging icons, swipe to the rightmost Home screen, then drag an icon to the right edge of the screen. You can create up to 11 Home screens. The dots above the Dock show the number of screens you have, and which screen you're viewing.

To go to a different Home screen: Flick left or right, or tap to the left or right of the row of dots.

To go to the first Home screen Press the Home button.

## Organizing with folders

You can use folders to organize icons on the Home screen. You can put up to 20 icons in a folder. iPad automatically names a folder when you create it, based on the icons you use to create the folder, but you can change the name. Rearrange folders by dragging them on the Home screen or by moving them to a new Home screen or to the Dock.

**To create a folder:** Touch and hold an icon until the Home screen icons begin to jiggle, then drag the icon onto another icon. iPad creates a new folder that includes the two icons, and shows the folder's name. You can tap the name field to enter a different name.

**To add an icon to a folder:** When the icons are jiggling, drag the icon onto the folder.

**To remove an icon from a folder:** While arranging icons, tap to open the folder, then drag the icon out of the folder.

**To open a folder:** Tap the folder. You can then tap an app icon to open that app.

**To close a folder:** Tap outside the folder, or press the Home button.

**To delete a folder:** Remove all icons from the folder. The folder is deleted automatically when empty.

**To rename a folder:** While arranging icons, tap to open the folder, then tap the name at the top and use the keyboard to enter a new name.

**Changing the wallpaper:** You can choose the images you want to use as wallpaper for your Lock screen and your Home screen. Choose an image that came with iPad or a photo from your Camera Roll.

In Settings, go to Brightness & Wallpaper, tap the image of the Lock and Home screens, then tap Wallpaper or Saved Photos.

Tap to choose an image or photo. If you choose a photo, drag or pinch it to position or resize it, until it looks the way you want.

Tap Set Lock Screen, Set Home Screen, or Set Both.

## Editing text

**To position the insertion point:** Touch and hold to bring up the magnifying glass, then drag to position the insertion point.

**To Select text:** Tap the insertion point to display the selection buttons. Tap Select to select the adjacent word, or tap Select All to select all text. You can also double-tap a word to select it. Drag the grab points to select more or less text. In read-only documents, such as webpages, or messages you receive, touch and hold to select a word.

**To cut or copy text:** Select text, then tap Cut or Copy.

**To Paste text:** Tap the insertion point, then tap Paste to insert the last text that you cut or copied. Or, select text, then tap Paste to replace the text.

**To undo or redo the last edit:** Shake iPad (yes, this is not a joke, just wobble it left and right and you will get the UNDO or REDO feature on the screen). Alternatively, if you are typing on Notes or another app, you can find an UNDO button on the number keyboard and a REDO button on the symbol keyboard (the #+= one).

There are many things you can do with ONE finger on the iPad: push the home button once or twice, delete an app, install an app, get to spotlight or change to a different home screen.

But starting with iOS 5 ("iOS means iPad Operating System") we now have things to do with multiple fingers. I try to say "5 fingers" but the truth is that these things work with 4 fingers.

Trick #1 is getting access to the multitasking tray which contains all of your open apps. This multitasking tray is different from the dock which holds up to 6 icons.

What is an open app, you might ask if you are normal? Well, on Macs and PCs when you QUIT, you are taking that application out of what is called RAM memory. RAM stands for Random Access Memory and it holds information -- both the app you load up and the project you do with that app. You may know that your iPad has 16 gig of RAM or 32 gig or 64 gig. Gig stands for gigabytes. One gigabyte equals approximately 1,000 Harry Potter books or a small library. You can find out the amount of RAM in your iPad by going to SETTINGS then ABOUT and then looking at CAPACITY.

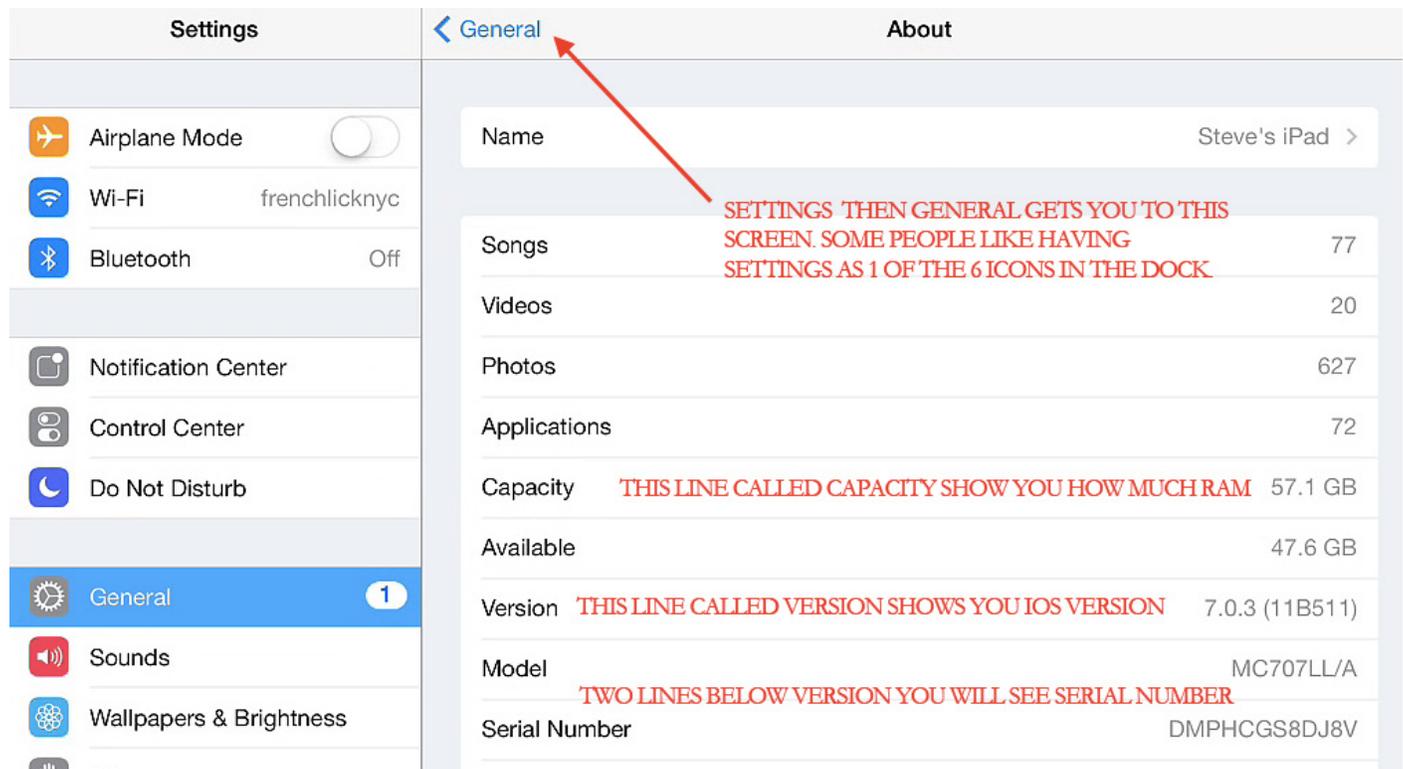

These words and metaphors should be part of your tech know-how. We have included them in our 5 day Summercore workshop since we started in 1985.

BYTE = 1 keystroke

KILOBYTE or KB or K = 1,000 keystrokes or 1 page of double spaced text

MEGABYTE or MB or MEG or M = 1 million bytes or 1,000 pages of double spaced text or 1 large book such as a Harry Potter book

GIGABYTE or GB or GIG or G = 1 billion bytes or metaphorically a small personal library with 1,000 books

With a standard Mac or PC computer, when you quit an application, it frees up the space in RAM. But with an iPad when you quit, that app stays in RAM. The collection of open apps can always be found in the multitasking tray if you double click on the HOME button.

What can you do with the multitasking tray? One thing is that you can close apps by pressing on one and swiping up. As a challenge, however, see if you can close up two at a time or three at a time by using two or three fingers and swiping up with two or three icons at the same time.

Another trick involves changing from one open app to another. The old fashioned way is to press the home button, then launch the other app either from the home screen or one of the side screens. The fancy way that I want you to practice is swiping horizontally with 4 fingers left or right when an app is open.

Another trick involves closing an app by pinching from an open hand to a fist with all 5 fingers. Yes, this is really hard to describe in words but much easier by video. And you can do a partial pinch if you want to reveal a bit of the background screen, perhaps the clock if it is being hidden.

Got it? If so, please practice, practice, practice. Do each trick several times with your right hand and then try it with your left hand. I am serious. It is all about muscle

memory. Or find a colleague or family member to teach and that will also help you learn better.

### **Two more iPad tricks that involve fingers:**

One trick involves splitting the keyboard by using two thumbs.

Another trick involves undocking the keyboard by using the dock/undock icon.

Once again, these will be easier to demonstrate by video!

One more tip about the volume buttons? you can use when in CAMERA MODE to snap the picture. In other words, either up or down (it does not matter) SNAPS the picture when you are in camera mode. This can be advantageous since it is easier to find at times, especially if you are snapping a picture of yourself.

### **More factoids to reinforce!**

- The icon called settings is the brain of your iPad and should be 1 of the 6 items in your dock.
- The camera roll is the library or picture memory for projects of your iPad. It contains more than photos. It can contain videos and projects.
- Pressing and holding on an icon causes the wobbling to happen so you can get organized with the home screens and finding apps.
- You can move apps around on your home screen.
- You create a folder by dragging one icon onto another.
- You can rename this folder by double-tapping on the folder and changing the name.
- You can add more apps into folders and you can remove apps from them.
- Once a folder has no apps and you remove all the apps, then the folder disappears.
- You can get to Spotlight by pulling down from the top of the iPad but you need to have your finger touch below the top light, around 1/2 of an inch. If your finger begins from the top edge of the iPad above the line, you get NOTIFICATIONS instead of Spotlight.
- Spotlight lets you search your iPad for an app or search the web, your contacts, your email.
- You can move apps from one home screen to another.
- You can choose to keep your apps in "logical order" or "alphabetical order" or even "order of importance." This is a personal choice but please stay organized and have a system that works for you!
- Getting to the multitasking tray shows the open apps.
  
- You can close an app by pressing and "tossing up" on an app in the multitasking tray.

- When an app is open, you can get to each of the other open Apps in the RAM chip by swiping left or right with four or five fingers.
- You can close an app by using 5 fingers and changing them into a fist
- You can get to the multitasking tray by double pressing the HOME button.
- You can remove apps from RAM once in the multitasking tray by pressing and "tossing up."

Why do this occasionally?

Reason 1: Because an app is being "funky" or "frozen" and you need to reset it by removing it from RAM memory and then launch it again.

Reason 2: Because the more apps that are open, there is a slight extra usage of the battery.

Reason 3: Because the more apps that are open that are not of value, the harder it is to navigate from one app to another because you have all these extra ones in the way.

- If you like video games, you should try to "toss up" 2 or 3 apps at once with 2 or 3 fingers. Good luck -- it is not so easy!

## **Splitting Keyboard and Undocking**

- you can split the one keyboard into two baby keyboards so you can type with 2 thumbs left and right
- you can restore the two keyboards into one keyboard by using two thumbs and pushing together
- you can UNDOCK the keyboard so that it will be in the middle of the screen instead of the bottom; to do so, you use the icon at the bottom right of the keyboard below the SHIFT button
- by the way, in a week or two, we will deal thoroughly with international keyboards (French, Arabic, Chinese, Spanish etc.) and how this is related to the iPad's voice listening ability in those languages

## **IMPORTANT**

I encourage you to "stay organized" in this course by maintaining either "a paper notebook" or "an electronic notebook" in which you keep track of

- things you learned
- things you want help on (so you can refer to when we talk each week)

You can get to our Shared Doc via <http://tinyurl.com/nov15ipads> -- important!

**Second Assignment for Lesson 1 (HW 1.2)**

URL= [www.macguru.biz/images/Skitch-Acquired-By-Evernote-Now-Available-For-Free!.jpg](http://www.macguru.biz/images/Skitch-Acquired-By-Evernote-Now-Available-For-Free!.jpg)

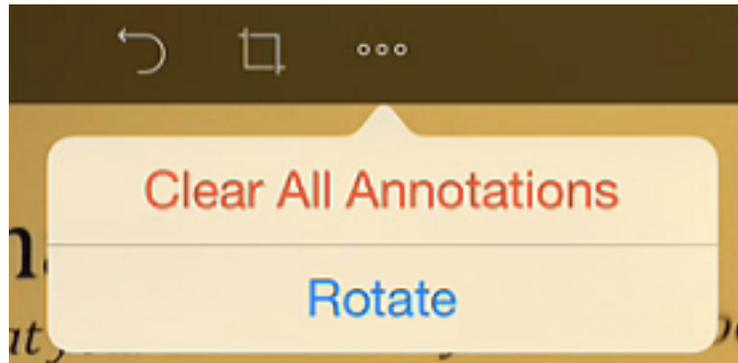

Download the app named Skitch and produce a graphic that is related to your curriculum. It could be a map of a country, an illustration for your Science class or your kindergarten class. Skitch on the iPad lets you take any graphic and in the words of the company Evernote that owns it, you can "annotate, edit, crop and share images and screen captures. Skitch is great for the flipped classroom, creating tutorials and highlighting specific aspects of an image."

Pretend that you have been hired by a publishing company to create a useful illustration for one page. With Skitch, you can type text of variable size, put arrows of variable size pointing to locations, blur out faces of children to comply with privacy laws, add tiny funky symbols and more.

I have made you a 9 minute Part 1 starter video at [http://youtu.be/YWS\\_k1yzTS8](http://youtu.be/YWS_k1yzTS8) and a Part 2 (7 minutes) video at <http://youtu.be/gVCgtaTIkKs>

You do not need to create a Skitch account. But if you do, Skitch on the iPad syncs with Skitch on the Mac or PC so if you have an account, you can access your Skitch library from your other device.

The top middle of the Skitch screen contains these three icons:

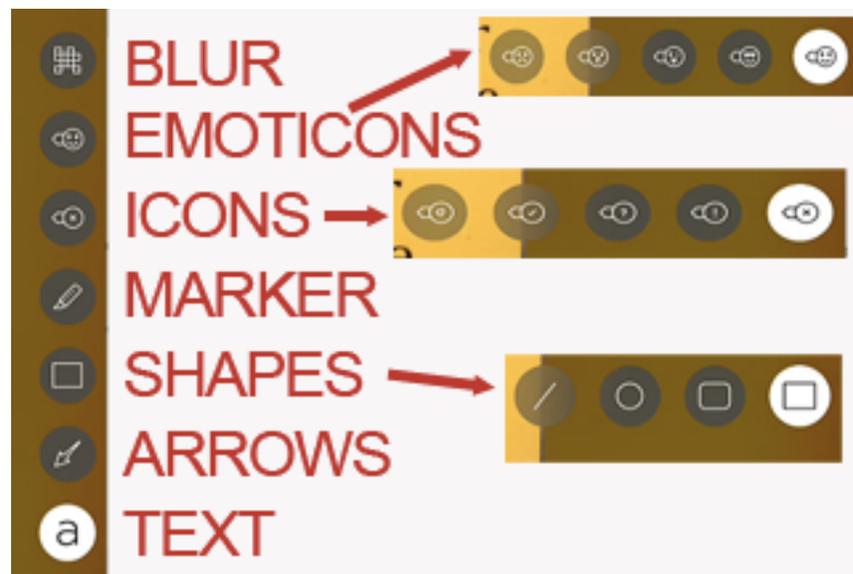

The one on the left  means UNDO. It will take back your last move and the one before that and so on.

The one in the middle  means CROP.

The one the right  leads to CLEAR ALL ANNOTATIONS or ROTATE.

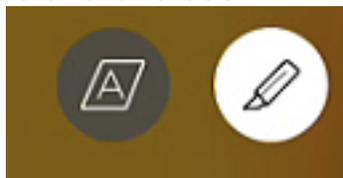

Below is a picture showing you the 7 different tools.

Here are the colors you can use but more importantly the slider on the bottom half that lets you adjust the size:

One of the icons for a marker has two choices

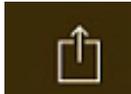

The icon on the left  is a HIGHLIGHTER which paint over something but allows the underlying layer to show through. Notice how I used it on the first M below in SUMMERCORE so that you can see the YELLOW HIGHLIGHT but can see through and see the M.

The icon on the right  is a PEN which paints over something and nothing shows through. Notice how I used it it below to paint over the second M so cannot see through.

At the upper right of the Skitch screen you will see the "Arrow in a Box" symbol

which means let us get this to someone or something. This Arrow in a Box is a "close to universal symbol" for saying "let us email this to someone or let us save this to the camera roll but most importantly let us get this project out of here and into someone else's hands or let us store it somewhere.

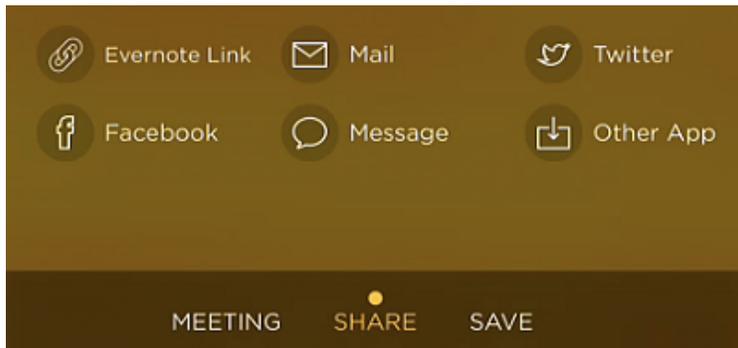

Take a good look at this *Arrow in a Box* because you will see it over and over again on your iPad. If you are under age 30, you are a digital native and understanding icons is something you do automatically. If you are over age 30 like me, you are a digital immigrant and you learn things best by studying and repetition.

Once you choose ARROW IN A BOX, you get this screen asking you how you want to send or preserve your Skitch creation.

1) You definitely want to choose MAIL so you can send it to me (sbergen33@gmail.com)

2) You also want to choose SAVE which means PUT IT AS A NEW ENTRY in the camera roll.

So HW#1.2 is to send me the picture you create from Skitch via email. This rubric below is from our two day iCore Course. If it helps you in terms of structure, use it. If not, then ignore it!

SKITCH	Thirds	JV	Varsity
Finding a Curriculum Picture that you will be able to use as an Illustration in a Curriculum Project	Get picture from Web, draw 1 arrow in Skitch pointing to something significant, put text on describing it.  Picture must be saved to the camera roll.	In addition, crop the picture before or after you start "skitchifying" it.  Also, put a thin colorful border around the outside of the picture.	In addition, get the URL of the picture and include as the caption of the picture before saving to the camera roll

## SPECS for the SKITCH ASSIGNMENT

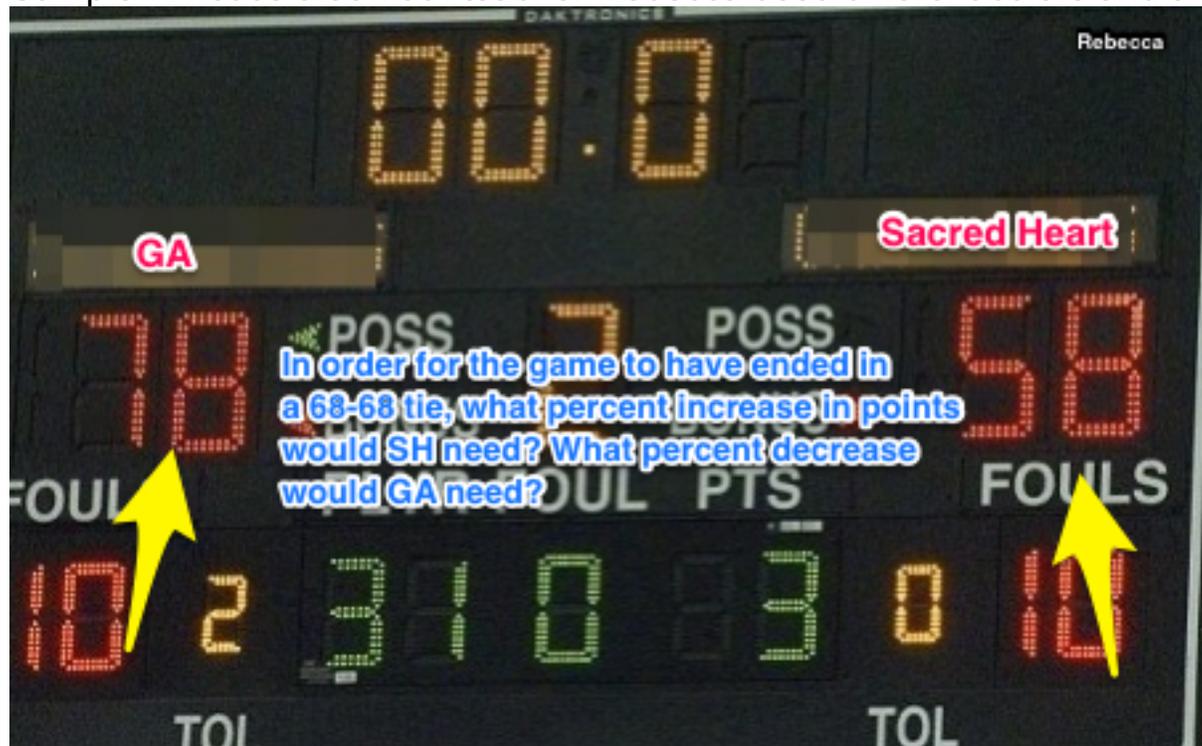

- 1) Make sure you put your first name in a corner when done before you send to me.
- 2) Aim high and do something you can use in a class with your students. Don't just do a silly sample but do something that teaches me something about your subject.
- 3) Try to use as many of the tools as possible.

Please make sure you write your name is on the picture! You can either email it directly to me from Skitch or you can put it first into the Camera Roll and then email it to me from there

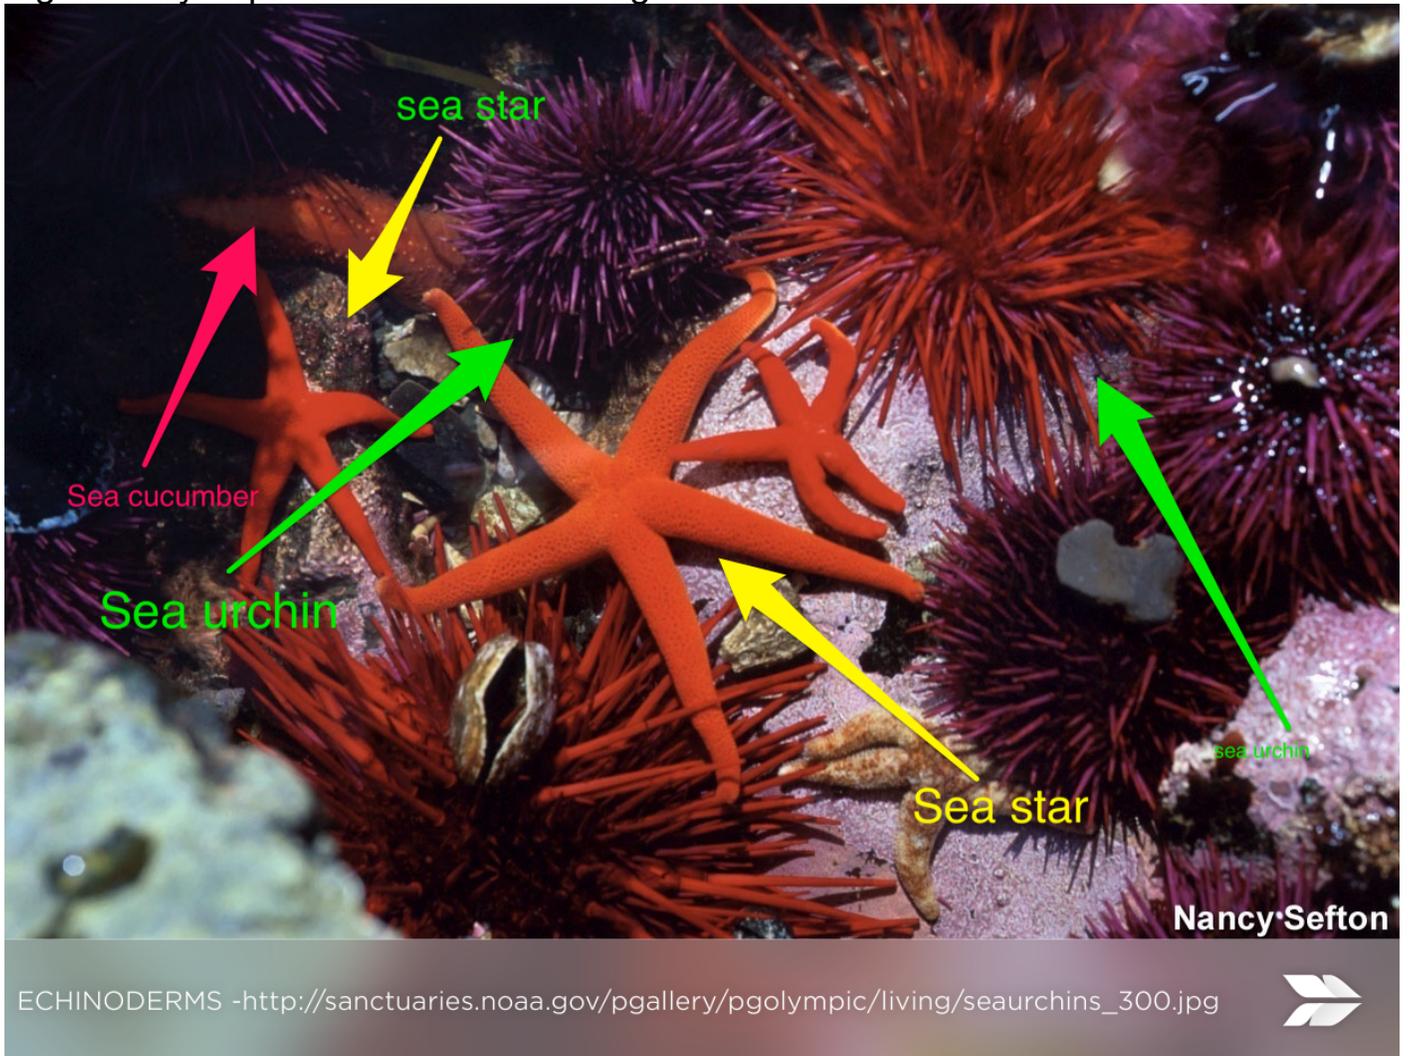

- Skitch allows you to crop, draw arrows or text onto a picture
- First step is to get a picture from the Web or take a Camera picture so that you have a picture in your camera roll that you want to "mark up" with Skitch
- Skitch lets you highlight and lets you pixelate a face (the way TV stations do to blur out a student's face for example)

Samples from Online participants in the past

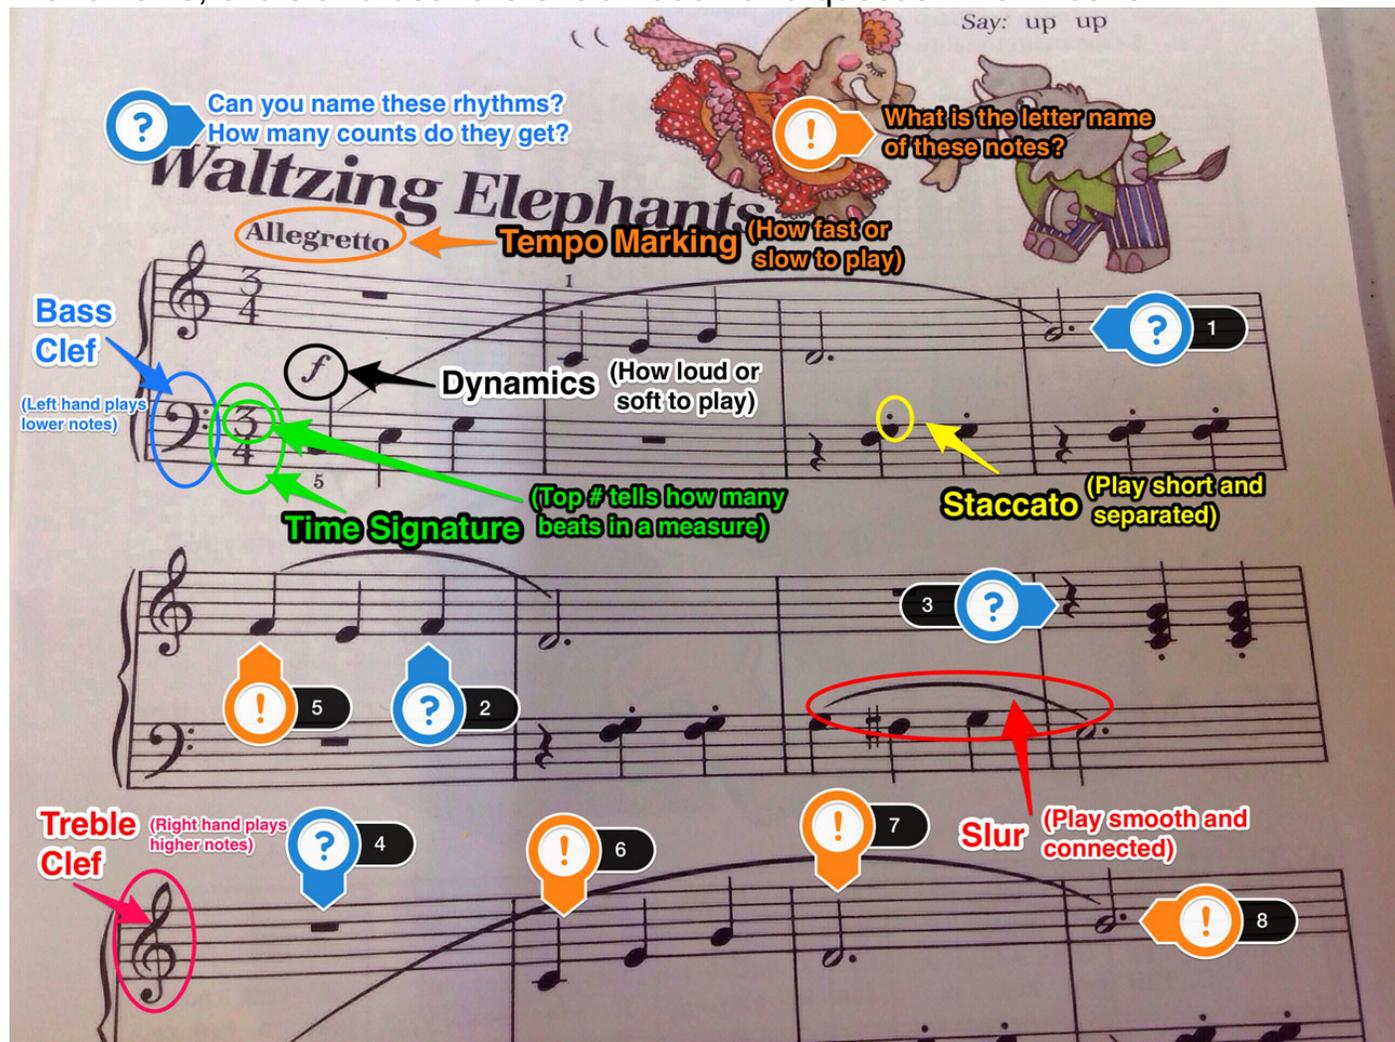

Sample 1: notice that math teacher Rebecca used different colors and arrows

Sample 2: notice that Science teacher Marisa used different colors for text and arrows and different sizes for text. Also notice that she copied and pasted the URL of the picture into the caption area of Skitch so it appears in white at the bottom. This is a great way to practice attribution using Skitch!

Sample 3: notice that music teacher Emily used text in different sizes, colors along with arrows, ovals and both the exclamation mark and question mark icons

**Waltzing Elephants**

Say: up up

**Allegretto** (Tempo Marking) (How fast or slow to play)

**Bass Clef** (Left hand plays lower notes)

**Dynamics** (How loud or soft to play) *f*

**Time Signature** (Top # tells how many beats in a measure)

**Staccato** (Play short and separated)

**Treble Clef** (Right hand plays higher notes)

**Slur** (Play smooth and connected)

Annotations include question marks (1, 2, 3, 4, 5) and exclamation marks (1, 2, 3, 4, 5, 6, 7, 8) pointing to various musical elements.

Sample 4: notice the pixelate feature, multiple colors, sizes, icons

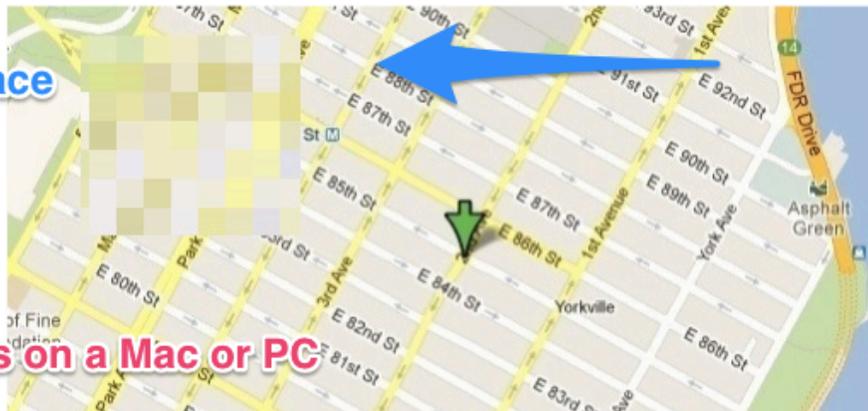

Draw arrows  
Write text  
Highlight with a pen

# SKITCH

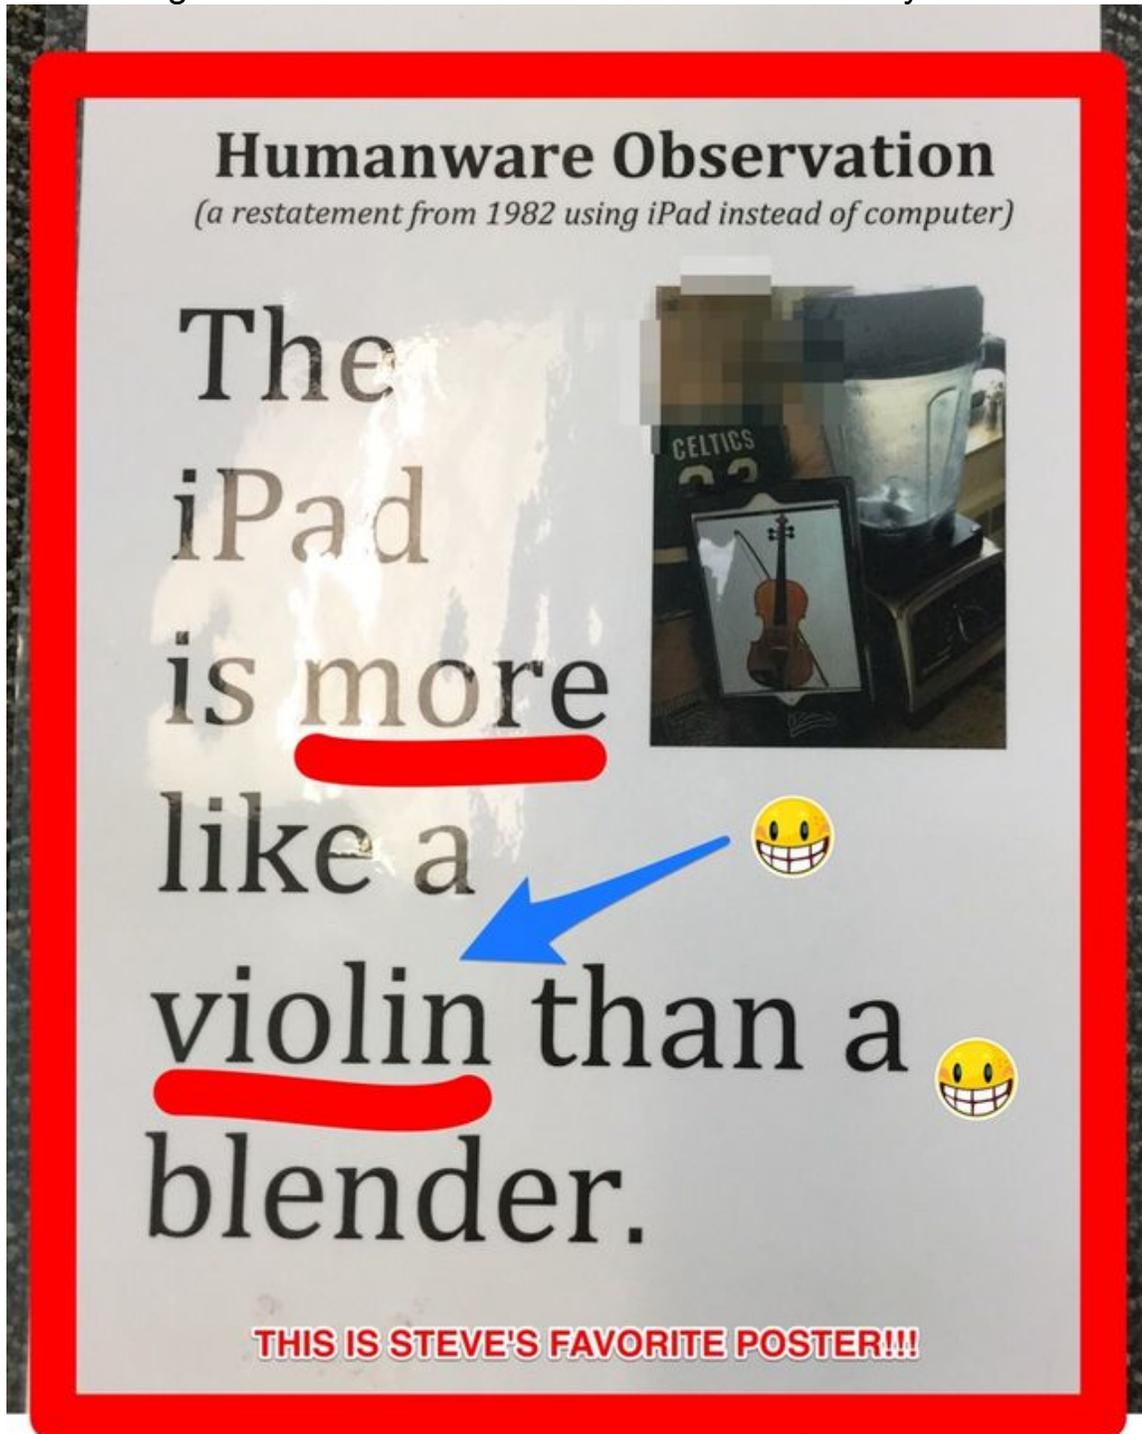

Change colors  
Use funky icons

Pixelate a face  
Crop

also works on a Mac or PC

Sample 5: notice the person used a rectangle to highlight the border along with underlining a word with the marker and one of the funky icons

The image shows a poster with a white background and a red border. The text on the poster is: "Humanware Observation (a restatement from 1982 using iPad instead of computer) The iPad is more like a violin than a blender." The word "more" is underlined in red. The word "violin" is underlined in red. A blue arrow points from the underlined "more" to the underlined "violin". There are two yellow smiley face emojis: one next to "like a" and one next to "blender". An inset image shows a kitchen scene with a blender, a framed picture of a violin, and a Celtic jersey. At the bottom, it says "THIS IS STEVE'S FAVORITE POSTER!!!".

**Humanware Observation**  
*(a restatement from 1982 using iPad instead of computer)*

The iPad is more like a  violin than a  blender.

**THIS IS STEVE'S FAVORITE POSTER!!!**

MORE ADVANCED SKITCH FEATURES • **OPTIONAL** •

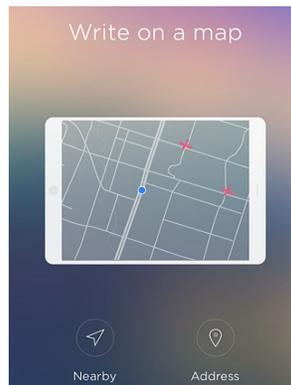

When choosing a photo to use in Skitch, you will see these options at the bottom.

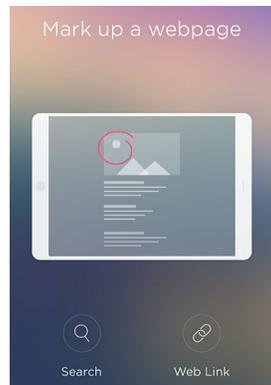

These are cool options for other pictures you can pull into Skitch.

Camera = a live picture you take

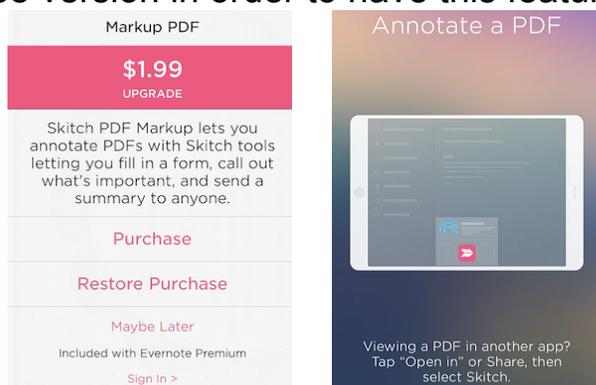

Map = a map you get by typing in an address or location and then you can annotate

Web = a web page you can then annotate and mark up

PDF = a neat feature that lets you annotate a PDF but they force you to pay \$1.99 for the upgraded non-free version in order to have this feature

SETTINGS = allows you to login with your EVERNOTE credentials if you use EVERNOTE. In this case, you will have access to your Skitch pictures through your Evernote account on this iPad or on another device.

Sign in to Evernote	Save in Evernote login to your account <a href="#">Download Evernote</a>
user name	
password	
Cancel	OK

### • OPTIONAL BONUS ASSIGNMENT (HW 1.3)

If you have a Google Drive account or Dropbox account, I have created a folder called SHARED IPAD ONLINE COURSE once on Google Drive and once on Dropbox. Please move your Skitch picture into either of these folders in addition to emailing to me. We can also do this together in our 30 minute meeting.

GD: After I give you access to this folder, you open your Google Drive app, then choose INCOMING and find the folder. Once this folder is open, you choose the + at upper right which lets you add something to this folder. You choose UPLOAD PHOTOS or VIDEOS then choose the Skitch picture. After it uploads, you need to use the "I" feature to rename it.

### OPTIONAL VIDEO on Moving Files from iPad to Google Drive

<https://youtu.be/b0pMdbskusk>

DROPBOX: You need to accept the invitation then navigate to the folder and choose + to add your Skitch file.

## Our SHARED ONLINE DOC (required) HW 1.4

You can get to our Shared Doc via <http://tinyurl.com/nov15ipads> -- important!

**HW 1.4** is to make sure you have sent me a picture that I can use on this page and to fill in the info next to your name. Also choose 5 of the vocabulary words per week and put in your short explanations

### **Vocabulary for this week (on our Shared Doc for your collective comments)**

App Store, Byte, Control Center, Dock, Gigabyte, Home Button, How Many Ports, How to Create a Folder, How to Split the Keyboard, IOS, Kilobyte, Megabyte, Multitasking Tray, Lock Orientation, Notifications, Open App, RAM, Remove App from RAM, Screenshot, Side Switch, Skitch, Spotlight,

What Does Curved Arrow  in a Box Mean

## List of the first 15 Skills (also on our shared doc)

**HW #1 15 Starter Skills** and Videos to be learning over the next week or two (these are also on our Shared Doc with a checklist for you to comment next to your name.

You can get to our Shared Doc via <http://tinyurl.com/nov15ipads> -- important!

Each skill should have an associated task and associated video. According to Piaget (who we think attended one of our first Summercore workshops decades ago) the best way to learn is to be watching the video on your laptop or desktop, using the pause feature frequently while you do the skill and practice with your iPad. If the links in yellow do not go to the video, your Plan B strategy is to copy and paste the yellow link into the URL box of your browser.

*iPad # 1 The Six Buttons (Inputs/Outputs)*

<http://youtu.be/fVBIOfISww0> (5.5 min) or <http://tinyurl.com/icoreV1>

*Task: Identify the name and function of each of the six buttons or ports: Home, Power, Side Switch, Volume, Headphones and Connector. Change the function of the side switch so that instead of MUTE it locks the orientation so the iPad does not wobble when turned 90 degrees.*

**NOTE: the iPad Air 2 and iPad mini 4 models do not have a side switch on the edge. With these models, you use the CONTROL CENTER to MUTE or LOCK THE ORIENTATION. This is not related to iOS 9 but simply is a hardware variation amongst different models.**

## Turn on Mute and Orientation Lock on iPad Air 2

Unlike previous iPad models, iPad Air 2 doesn't have a side switch. Learn how to turn on Mute and Orientation Lock using the Control Center on your iPad Air 2.

On your iPad Air 2, you'll find Mute and Rotation Lock in the [Control Center](#). Swipe up from the bottom of the screen to reveal the Control Center.

### iPad # 2 Minimize an App in Two ways

<http://youtu.be/h7hTZhZVomY> (2 min) or <http://tinyurl.com/icoreV2A> (note the "A")

Task: Demonstrate the two ways to minimize an app so that it is off the screen, one by using the Home button and the other by using 5 fingers that tighten into a fist. Open several apps on your iPad and for each one minimize it both ways.

### iPad # 3 Switch from One App to Another

[http://youtu.be/e5w\\_IQ\\_Vy-E](http://youtu.be/e5w_IQ_Vy-E) (2 min) or <http://tinyurl.com/icoreV3B> (note the "B")

Task: if you have done iPad Skill #2 above with several apps, then you should understand that they are all open in RAM. Now demonstrate the 5 finger swipe to go from one open app to the next open app.

### iPad # 4 Multitasking Tray (this line is for iOS 8 version)

<http://youtu.be/zbSgy2aIHHg> (2.5 min) or <http://tinyurl.com/icoreV4>

Task: Demonstrate how to get to the multitasking tray and demonstrate how to get an app out of RAM. Then as a challenge, see if you can do two at a time. Provide several reasons why removing an app from RAM can be helpful.

iOS 9 Update: instead of a multitasking tray, when you double click on HOME button, you get to the "multitasking center" where each open APP is on a metaphorical 3x5 card and the cards are stacked in overlapping fashion. You can discard any app in the "multitasking center" by dragging up and you can do two at a time if you want.

Our iOS 9 video at <https://youtu.be/pbQTyPaTp5l> or

<http://tinyurl.com/icorev4b> also shows the new "slide feature" that lets you slide the right edge over so that you can have two apps open at once -- left and right.

*iPad # 5 Spotlight Search*

<http://youtu.be/gqP5bXEhUZ8> (6 min) or <http://tinyurl.com/icoreV5> (**this line is for iOS 8 version**)

Task: Demonstrate how to a Spotlight Search and search for a common word, your first name or one of the Apps on your iPad; now program your Spotlight Search and turn off all the checks and search again.

**NOTE: Our iOS 9 video at <https://youtu.be/fG0oOffyYtE> or <http://tinyurl.com/icorev5b> shows the new Spotlight feature that has Siri suggestions and NEWS below the search**

*iPad # 6 Read Text Aloud*

<http://youtu.be/78C xv1bCKpo> or <http://tinyurl.com/icoreV6A> (**this line is for iOS 8 version**)

Task: Use **SETTINGS** and **ACCESSIBILITY** to enable your iPad to read text aloud -- whether from the web or in a word processor. Test it out and then add the feature to read in a different language.

**NOTE: iOS 9 version has SPEECH as the fifth item under ACCESSIBILITY. You can turn on switches to SPEAK SELECTION or SPEAK SCREEN or SPEAK AUTO-TEXT. You can choose male or female voices and can choose the accent/nationality of the speaker. The SPEAK SCREEN feature involves using two fingers swiping from the top plastic/metal edge of the iPad.**

**Our iOS 9 video at <http://tinyurl.com/icorev6b> or <https://youtu.be/tQJ6LTCxPKs> also shows the new iOS feature of searching within SETTINGS for the feature you are looking for. This iOS feature is wonderful since there are so many subchoices within SETTINGS.**

*iPad # 7 Notifications*

<http://youtu.be/7eeTbzteOKI> (2 min) or <http://tinyurl.com/icoreV7A> (note the "A")

Task: Demonstrate how to get to see your NOTIFICATIONS and then demonstrate how to change what appears within SETTINGS.

*iPad # 8 The Control Center*

<http://youtu.be/W0ChP0j2f4A> (2.5 min) or <http://tinyurl.com/icoreV8>

Task: Demonstrate how to get to the Control Center. Count the number of things you can do within the Control Center. Now change brightness from one extreme to the other. Speculate battery savings.

*iPad # 9 Settings and Camera*

<http://youtu.be/Nae72sRgNTw> (5 min) or <http://tinyurl.com/icoreV9>

Task: Put these 2 important icons -- SETTINGS and CAMERA -- into the dock and snap 1 picture with the front camera, 1 square picture with the rear camera and make 1 video under 33 seconds. HDR stands for high dynamic range and should be left off until you learn its intended uses (see webpage [tinyurl.com/hdr33](http://tinyurl.com/hdr33) for the esoteric details). Using SETTINGS you can alter photo and slideshow settings including HDR.

## iPad # 10 The App Store

<http://youtu.be/ewXYaI5zkaE> (4 min) or <http://tinyurl.com/icoreV10>

Task: Put the App Store into your dock, then visit the App Store and download (unless you have them already) the three apps named Skitch, Google Drive and Dropbox.

Why Google Drive and Dropbox? Because they allow you more flexibility in moving files between your iPad and your standard computer.

OPTIONAL: See a different video at <http://youtu.be/iBkyrdRRLDE> (5 min) or <http://tinyurl.com/icoreV10A> for why we love GD and Dropbox.

## iPad # 11 Organize your iPad Using Folders

<http://youtu.be/71s-qQaSyXQ> (7 min) or <http://tinyurl.com/icoreV11>

Task: As an exercise, put three apps that begin with A-M into a folder called A-M and put three apps that begin with N-Z into a folder called N-Z.

## iPad # 12 Important Numbers

[http://youtu.be/qO\\_G\\_bP6w7w](http://youtu.be/qO_G_bP6w7w) (5 min) or <http://tinyurl.com/icoreV12>

Task: using settings (general, about) find your serial number and find how full your iPad is in terms of gigabytes used and total gigabytes. Also find out what iOS your iPad is running. Restate the gigabytes used in terms of bytes, kilobytes and megabytes.

## iPad # 13 Splitting your Keyboard and Undocking your Keyboard

<http://youtu.be/VkvUBovyjZk> (2 min) or <http://tinyurl.com/icoreV13>

When using the keyboard, rip the keyboard apart with your thumbs (or press and hold on the keyboard icon on the bottom right and choose Split). Task: go to <http://teachingcompany.com/typing> and time yourself with SPLIT vs. non-SPLIT on one of the challenge sentences there. When using the keyboard, undock it with lower right icon so that it is now in the center of the iPad. Speculate why anyone would want this. Hint: think about the occasional time when the keyboard is covering something that is essential.

## iPad # 14 Save Images from Web (and Practice Attribution)

<http://youtu.be/IT8czo610b00> (5 min) or <http://tinyurl.com/icoreV14>

Tap and hold on an image. Save the image to your photo library (camera roll). Practice attribution when possible.

Task: Add 3 pictures from the web to your Camera Roll.

## iPad # 15 Take a Screen Snapshot

<http://youtu.be/F08M92Am6lg> (2 min) or <http://tinyurl.com/icoreV15>

Push and hold the power and home buttons simultaneously until the screen flashes. The photo will be stored in your photo library (camera roll).

Task: Add 3 screenshots to your Camera Roll.

*Sorry this lesson is longer than intended but I have been looking forward to beginning our course and would love to get off to a fast start!*

## OPTIONAL ASSIGNMENT: PicCollage HW 1.5

PicCollage allows you to make a stylish collage out of 2-6 pictures, easily cropping them and arranging them.

Please first watch this 11 minute Intro video on PicCollage --

[http://youtu.be/NxzhNyj\\_UYA](http://youtu.be/NxzhNyj_UYA) -- which is a utility program (like Skitch) that lets you take a bunch of your pictures and easily make a visually attractive collage in either an informal or structured layout.

People in iCore or Summercore over the last few years absolutely love PicCollage because it is both useful and easy! Here are the highlights of the first video:

1. move pics with 1 finger
2. resize and rotate with 2 fingers
3. delete pics by flicking or dragging to the Educreations TRASH at top right
4. if pics on top of each other, tap once to bring to top
5. tap and hold on a pic to move to the back
6. double tap a photo to edit it
  - crop
  - edit photo
  - edit border
  - set as background
7. add text by tap and hold
8. resize text
9. select background with long tap
10. undo (Trash)

### Special notes re PicCollage

- You can bring in MULTIPLE PICTURES at once, not just one a time. Look at the checkmarks below in the picture on left.

When you double tap on a picture (not the background) you get the 5 choices you see above in the picture on the right.

# iPads

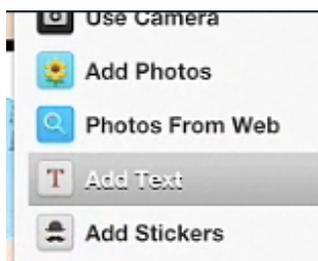

You can do special effects on the picture via EDIT PHOTO if you double tap on the PHOTO. Remember that a double tap on the PHOTO is different from double tapping on the BACKGROUND.

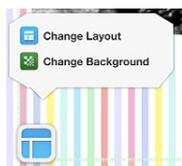

So when you choose EDIT PHOTO you get these choices on the right that include letting you highlight a portion of your picture and blur the rest ("FOCUS").

You can add text (like Skitch) to the background by double tapping on the background (not the picture). Here is what you see when you double tap on the background

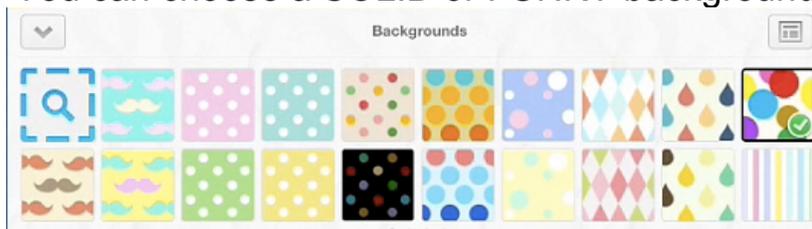

Notice above that there is a feature of PicCollage that lets you also add stickers! Just like with photos, you can add a BUNCH of stickers at once with the checkmarks. And yes, you can resize them and change the orientation.

And then for the best feature! The icon at the bottom left brings up the choice to CHANGE LAYOUT or CHANGE BACKGROUND.

You can choose a SOLID or FUNKY background

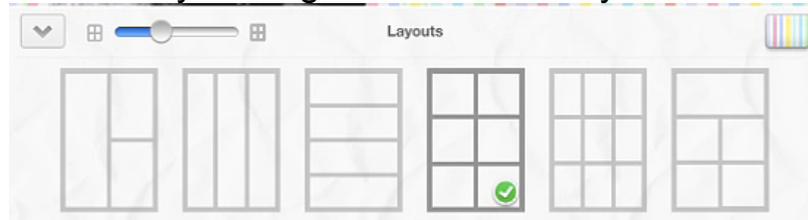

# iPads

Lesson 1 page 26 • 11/2/15

More importantly, you can change the LAYOUT. The tool on the slider on the left is the THICKNESS of the borders. Note: all collages are vertical with this orientation. You cannot create a sideways collage. You must use your iPad in vertical mode!

The trash can at the top right is also the UNDO button. This is not standard. You get rid of a picture or sticker by either "flicking it" or dragging to the trash can.

A picture dragged into a frame will attempt "magically" to automatically fit that space if you tap and press and hold for a few seconds. But it is NOT a perfect procedure and does not always work the way you hope.

And at the bottom right, you have our ARROW in the BOX that lets you take your creation and send it by email or other convenient means. Yes, PicCollage has a wonderful Achilles' heel!

**PicCollage HW Pyth Triplets 5 min--** <http://youtu.be/v3flweYOSQA> -- to focus on the assignment. In this next video, I pretend that I am doing the assignment on the topic of Pythagorean Triplets in geometry. This video assumes you know most of the features of the app.

**REQUIRED HW 1.6 re SEESAW**

I have created a course on Seesaw called Online F2015 Class. Seesaw is an incredible lower school app that allows the teacher to gather the work from students. The teacher can view the student's work but also can share any student project with the whole class if desired. Once you install the Seesaw APP on your iPad, you can easily go to any picture in your camera roll (e.g. Skitch) and turn it in to me via Seesaw. To join Seesaw and join our Online Aug 2015 Class, you can do so via this QR code. Also, I can help walk you through this via our phone call.

**To sign in as a student:**

1. Open the Seesaw Class app on an iOS or Android device -OR- go to <https://app.seesaw.me> using Chrome or Firefox web browser.
2. Tap "I'm a Student".
3. Scan this QR code using Seesaw's built-in QR code reader.

Once you are in Seesaw, you click on the

to ADD an ITEM. You then choose CAMERA

ROLL and find your SKITCH picture. Now you click the

at the upper right to SUBMIT.

## INDEX of HIGHLIGHTS can be found on the last page

- ❖ First Assignment for week 1 (HW 1.1) -- 15 Starter Skills with 15 videos and your 15 comments (page 4) get posted onto our shared document. The actual 15 skills can be found later in this PDF.
- ❖ Bytes, Kilobytes, Megabytes and Gigabytes (pages 5-6)
- ❖ Second Assignment for week 1: Skitch (HW 1.2 on page 9)
- ❖ Watch my 2 Skitch Videos (page 9) Send me the picture you create by email (p12) and by Seesaw
- ❖ More Advanced Skitch features (page 19) Optional
- ❖ Optional Assignment (page 19) -HW 1.3 Put your Skitch assignment into a Shared Google Drive or Shared Dropbox folder that I have made called for us called **Shared iPad Online Course** -- optional video on moving files from iPad to Google Drive
- ❖ HW 1.4 Our Shared Doc -- choose 5 per week + send picture + put info into table (page 20)
- ❖ Optional Assignment (pages 24-26) -- PicCollage HW 1.5 --Watch the two optional videos and then create a collage of several of your pictures.
- ❖ Required HW 1.6 and then turn in your Skitch HW via Seesaw (page 27)

You can get to our Shared Doc via <http://tinyurl.com/nov15ipads> -- important!
