Monday 10/19 -- Hi Chris, Dee, Gemma, Kimberly and Lisa -- great job with the 3 vocab words in our shared doc. I love reading what you wrote!

Who's Who in our Scratch Online Course:

Our shared document is at http://tinyurl.com/f15coding

Our web page with assignments is http://teachingcompany.com/f15

REMINDER: when you have completed the HW for a lesson or even a "bunch of programs" please send me a quick email so I can go through your docs and give you feedback! Steve

• LESSON 3 -- Costumes, Sprites, Scripts and more use of Random

First for those of you who did or tried the tessellation: beware of borders. When you get to the border of the stage, strange things happen! The way to compensate is with

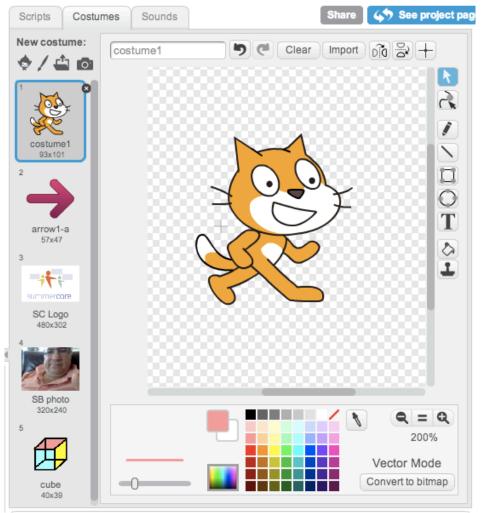

the SENSING command

Secondly, if you were put off by the math in lesson 2, you are not alone! Several others in our class had the same reaction. I will try my hardest to minimize math references this week or at least make them optional!

Let's begin by talking about one Sprite with multiple costumes.

When you click on the COSTUMES folder tab right next to SCRIPTS, you see

with a rich collection of features. At the upper left, the NEW COSTUME button

Iets you add a costume from the library, paint/modify your own, from your

Scratch • Lesson 3 page 3 • Oct 19

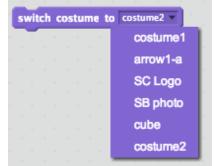

All lessons stored at http://teachingcompany.com/

hard drive or from a new camera photo. I have done a few samples. Please note the

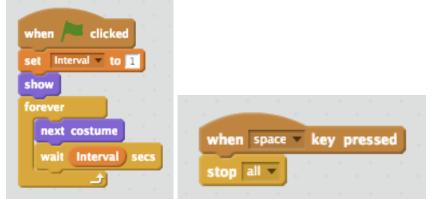

very faint hard to read + sign in the editor which is where the ink comes out from the back of the cat's neck (or whatever costume you are using). Every tiny button reveals its identity if you hover over it. Having one Sprite with multiple costumes is not the same as later when we have multiple Sprites. You can rename a

costume by typing in the costume box after you click on the costume you wish to rename. The Paint Editor is extraordinary with both Bitmap Mode and Vector Mode -- the former lets you easily fill regions e.g. my cube while the latter lets you easily resize an object. You can switch from Bitmap to Vector mode seamlessly.

You can DELETE or DUPLICATE a costume by right mouse clicking on it (PC) or ctrl clicking (Mac). There are two programming commands that deal with COSTUMES. They are located in the purple LOOKS section. The SWITCH COSTUME tells your Sprite to put on a specific costume with the pull down arrow specify which costume:

The NEXT COSTUME command just goes to the next one and after it reaches the last costume it goes to the first. Notice that I have a variable called INTERVAL which is initialized to be 1 so that it is WAITING 1 second after each costume.

My reason for having a VARIABLE for the WAIT is to affect the speed as you will see on the next page. Required HW 3.1 Write a program modeled after the one above where you have multiple costumes and you are basically having a slideshow of your costumes. Try to have at least one costume of each type (the Scratch library, a file on your hard drive that perhaps you got from the Web, a graphic you drew, possibly a picture you took

with your camera). Use the WAIT command so that there is a bit of a delay each time it changes costumes.

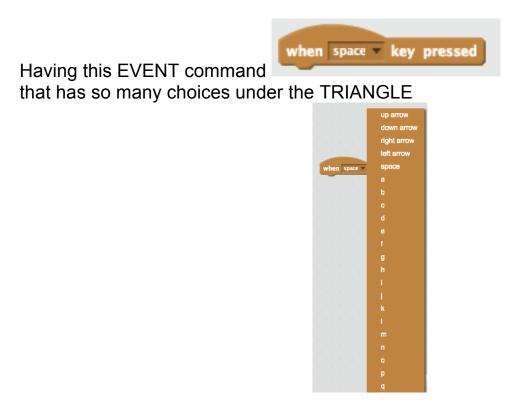

Optional: add features like this so while the slideshow is happening, you can move the sprite left/right or up/down or both. My code below also slows down or speeds up the slideshow by making the variable called INTERVAL to be bigger or smaller.

when down arrow very key pressed	when up arrow very key pressed
set Interval v to Interval * 0.5	set Interval v to Interval 2
move -50 steps	move 50 steps

Note that I am using the BROWN command from the EVENT category that says "when up arrow is pressed" do these things:

thing 1 (change the value of INTERVAL so that it is either double or half of what it used to be)

thing 2 (move forward or back 50 steps)

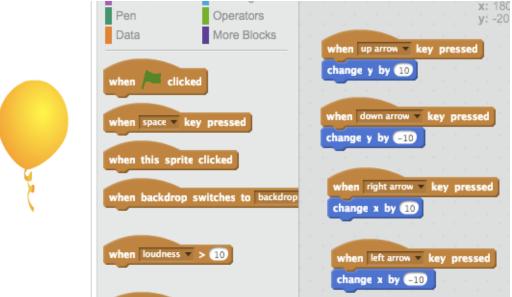

Scratch • Lesson 3 page 5 • Oct 19

All lessons stored at http://teachingcompany.com/F15

leads to wonderful uses in creating games. To give you a glimpse of where we are going, try changing the CAT to a BALLOON or a BALL and now write this kind of program.

With just these four commands, you can navigate your balloon around the screen. Now imagine a maze in which the walls are green. Pretty soon, you will be able to program the balloon to pop if and when it hits one of the green walls. Got it?

HW 3.15 Write a program that makes a balloon (or ball or other costume) move in all four directions based on the user pushing one of the four arrows.

Another use of the NEXT COSTUME command is to achieve

animation. If you look at the standard CAT that you get with every new program,

you will see that they give you two cats named costume1 and costume2 . If you use the forever loop below you can make animation happen via this very simple program (on the left) that shows the cat is walking. Add a glide command on the right and you can watch the cat walk randomly on the screen.

The URL for this sample program is http://scratch.mit.edu/projects/45463540/ and is named Lesson 3 Cat Animation

HW 3.16 Get this program from my library or via URL, remix so that it is now yours. Change the named to HW 3.16. Alter the speeds to see if you can improve it.

Now let's talk about multiple Sprites with one costume.

Consider this program with my standard header and one Sprite, the standard cat:

when / clicked	F
pen down	
set pen color to 199	
set pen size to 3	
ga to x: 0 y: 0	
point in direction 0	
clear	
repeat until y position > 100	
move pick random 1 to 10 steps	
wait 2 secs	
play sound meow -	

HW 3.17 Hopefully, you can figure out what it does, but this required 9 minute video at http://youtu.be/oGwmUBQMy3o should help you. I use the above script with three Sprites and one costume. The video is titled

3 Cats Race Up the Screen

and shows a race that leads us to exercise 3.2. Note the use of Y POSITION above.

HW 3.2 Write a program similar to the one above with 3 cats all facing right and racing from left to right horizontally across the screen with different speeds based on different use of random numbers and the WAIT command. Include a sound that each cat makes going across the finish line.

HW 3.21 Optional Challenge Bonus: use the technique described on the previous page with next costume and make one or more of the cats animate while travelling.

Hint: you will be using X POSITION since you are making the cats go left to right.

Next, back to coins

Last week, we discussed the program to flip a coin.

Now -- with our costume know-how, we want to modify it so that you see a HEAD or a TAIL when you flip. Part of the work you need to do involves getting the two pictures from the web or using your camera. In my library/studio, you can find the program called **2014 Lesson 3 Flip a Coin (with coins showing)** at http://scratch.mit.edu/projects/12635059/

HW3.22 This week in lesson 3, please watch the follow-up 22 minute video at http://youtu.be/YTIt69KrzYA on Flipping Real Coins. On this video, I show you how I took the pictures of a coin from the web and added them as files into the COSTUME section of my library. Notice the use of the IF _____ THEN _____ section and the new command SWITCH COSTUME. I also have a section on BROADCASTING MESSAGES in Scratch, something I have shared with a few of you during our weekly conversations. This will be formally introduced in the next few weeks.

	when 🦰 clicked	
	pen down	
	set pen color to 199	
	set pen size to 3	
	go to x: O y: O	
	point in direction O	
	clear	
	repeat 10	
	show	
	set COIN - to pick random 1 to 2	
	if COIN = 1 then	
	switch costume to HEADS2	
Lesson 3.1 Flip a Coin	wait 0.5 secs	Lesson 3.1 Flip a Coin
by sbergen33		by sbergen33
V371	if COIN = 2 then	
	switch costume to TAILS2	
	wait 0.5 secs	
A DECEMBER OF THE OWNER OF		
TITITUTE E	hide	LINE COLOR
ENTE CEN		

HW 3.3 Modify your coin program from last week so that it displays COINs. Or if you did not do it last week, please do it this week.

Next let us deal with dice

The next program uses random numbers to simulate rolling dice. We want to use two dice so we need 12 costumes, 6 for the red die and 6 for the white die.

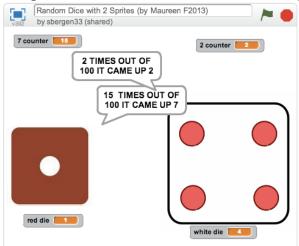

I have done the work for you so that you can focus on the programming. This program is marked **Lesson 3 Dice Template (graphics no script)** and you can get it from my library/studio. URL is https://scratch.mit.edu/projects/16936599

Sources for my dice graphics: http://t1.ftcdn.net/jpg/00/34/26/52/400_F_34265213_6dfUzSQPOP5LjMlqmk9gDvZwqBJYImRF.jpg and http://image.shutterstock.com/display_pic_with_logo/65880/65880,1176077587,1/stock-photo-white-dice-in-a-row-from-to-3038623.jpg

OPTIONAL HW 3.4 Use the 12 dice I have given you in the template above to create a program with two Sprites that will roll a pair of dice 100 times, showing the dice on the screen. Count the # of times it comes up "2" which some people call "snakeeyes" and count the # of times it comes up "7" -- the most likely outcome with two dice.

On the next page is a completed program by one of the people in the Fall 2013 course. Please use it if you get stuck and want to see a sample.

All lessons stored at http://teachingcompany.com/F15

HW 3.5 The program called Lesson 3 Random Scribbling is one that randomly scribbles on the screen. Modify it so that it scribbles with a random color and with a random pen thickness.

wh	en 🦰 clicked						
pe	n down						
set	pen color to 199						
sel	pen size to 3						
go	to x: 0 y: 0						
ро	int in direction 💽						
cle	ar						
for	ever						
ſ	set HOWFAR - to	pick	rando	om 🤇	33) ti	66	ו
	move (HOWFAR) st	eps	· ·				1
	set ANGLE to pi	ck ra	ndon	33) to	90	1
	turn (* ANGLE) de	egree	s 👘				
	-						

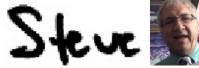

What is cool about this program is that eventually (about 15 min) the screen is solid red. I find it interesting to watch (like a fire place) in a side window while I am working on other things. Total randomness. Total chaos.

By the way, here is my random chaos 20 minutes later -- solid red!

HW 3.55 Continue adding 3 more vocab words per week to our shared doc.

Have a good week,

Scratch • Lesson 3 page 11 • Oct 19 All lessons stored at http://teachingcompany.com/F15

OPTIONAL 3.6 Challenge:

Write a program that has the computer pick a number from 1 to 100 but not tell you. The computer then lets you guess and tells you each time "too high" or "too low" until you guess the number.

If this interests you and you choose to work on this one, please watch the optional video at http://youtu.be/NCUcEcZxxeM that explains it all.

Lesson 3 -- Guess the Number (2 min)

Sample screen snapshot below. I am not sharing the code with you, however.
